RUBY ON RAILS
DEVELOPER VACANCY!

BE A PART OF OUR TEAM!

REMOTE, FULL-TIME FULLY FLEXIBLE ROLE, COMPETITIVE SALARY

About Fizzbox

When we launched Fizzbox in 2018, our aim was to provide an easy way to choose, book and pay for experiences online. Since then, Fizzbox has grown fast, adding thousands of innovative activities to our listings, and proving to be loved by customers and experience providers alike.

We believe in the power of connection. We strive to make it simple for our customers to connect with the people that matter in their lives, whether that's work colleagues, family members, old friends, or new friends.

Why join our team?

Our team are engaged, knowledgeable, passionate, and diverse. And, most of all, we love what we do.

We practise a creative approach to engagement and motivation and have built a company culture that stands on togetherness and inclusion. This doesn't just have a positive impact on our business success – it also brings a little extra magic to our day-to-day lives!

We prioritise employee wellbeing, have a modern benefits package in place, and offer a flexible approach to working, so our team can fit their work around their busy lives.

What's on the horizon?

We are currently embarking on an investment campaign, which will turbocharge Fizzbox's growth - and we know that market-leading technology is the key to our success. We're looking for a senior level Ruby on Rails Developer, who has an appreciation of the challenges faced by a business in start-up mode, but who is ready and willing to align with an aggressive growth strategy in the near future - and scale our platform accordingly. Could you be the right person to join us on our journey to become a global household name?

About the role

The Ruby on Rails Developer has a wide brief, including adding new features and making User Interface improvements to the Fizzbox website, customer login and experience provider platform, leading key projects, and maximising the efficiency of internal workflows. The Ruby on Rails Developer is adaptable to business change and enjoys managing a busy workload within a fast-paced environment.

The role is based remotely and reports into the CTO. This is a senior role within a small Design & Development team that is set to grow in line with our investment campaign. We're looking for someone who can support the implementation of internal technology and process, in order to build a dynamic, agile and high-performing Design & Development team.

Requirements

Key requirements

- Strong working knowledge of Ruby on Rails is essential
- Experience of building bespoke applications
- Proficient at writing unit and integration tests in RSpec
- Good working knowledge of Relational Databases
- Minimum 3 years of commercial experience
- Proven experience of working within a start-up and/or growth environment

Preferred but not essential

- Development of responsive applications (HTML, CSS)
- Development of User Interfaces with React
- CI/CD and deployment workflows
- Experience of Amazon Web Services and administration of Linux servers
- Experience of line management and implementing team infrastructures
- Experience of high traffic applications

Our ideal candidate

- Collaborative team player
- Happy to take direction but can also work on own initiative
- Confident, friendly, and warm, with a good energy
- Able to build effective, professional relationships with internal and external stakeholders
- Sound judgement and decision making
- Great attention to detail
- Able to juggle a busy and varied workload

Fancy being our new Ruby on Rails Developer?
